

Saving the Children in Uganda

Imagine if you only had one t-shirt and one pair of shorts that you had to wear every single day. What if all you had to drink was one cup of dirty water? Well, that's how children in Uganda are living. That's why we should be nice, thoughtful and send them care packages.

Did you know children in Uganda wear the same clothes every single day, for years? So if they only have that one t-shirt or that one pair of shorts then after a while the clothes could wear out, or the kids would grow out of the clothes. Also, the clothes could have germs on them so the children could get very sick. That is why we need to send them clothes!

Could you imagine if all you had to drink was one cup of dirty water? Well, that's how the children are living, too! If all those children only have one cup then they could get very sick. Also the children could get very dehydrated because they don't have enough to drink. We can help by providing life straws, more fresh water, and help them dig better wells.

Did you know children in Uganda can't afford 60 cent life-saving medicine? One of the sicknesses the children get is called "malaria". How they get malaria is the mosquitos there will bite the children and give them the sickness. So why don't we pitch in and give them medicine, money, and mosquito nets so the children don't die?

These children are suffering, they NEED YOUR help!!! PLEASE help by sending money for the children in Uganda.
